- Close vendor relationship
- Exploit latest product Database internals

Protect your business

The importance of effective database management

A relational database is one of the many complex components within your enterprise infrastructure. Typically, it underpins mission critical business applications, meaning optimal configuration and tuning of the database is paramount to ensuring your Service Level Agreement with the business is achieved.

Effective Database Administration requires substantial experience; each installation is unique and must be configured to meet the objectives of the business. This can only be achieved when the Database Administrator has a broad range of experience and has built up a detailed knowledge of the many factors influencing the performance of the database technology.

Traditionally access to highly skilled and experienced Database Administrators is expensive or scarce to find. The Remote Database Administration Service delivered by Actian Managed Services is different. As the name suggests it is a remote service delivered by highly experienced Actian Database specialists. Over many years, the Managed Services team have developed a suite of utilities which enable them to provide cost-effective semi-automated management of the database whilst still considering the individual requirements of each installation. The service delivers the following benefits to your organisation:

Key Benefits	Cost Management	Stability
<ul style="list-style-type: none"> ▪ Highly skilled Consultants managing the database Environment ▪ Access to worldwide Actian resource pool ▪ Fast track to Actian engineering ▪ No reliance on contractor resource ▪ Cover provided for annual leave and unplanned absence ▪ Deal directly with software vendor 	<ul style="list-style-type: none"> ▪ Reduce and control operating costs ▪ Free internal resources for other purposes ▪ Remove the need to train inhouse resources ▪ Fully inclusive service, no hidden extras ▪ Helps you achieve SLA's 	<ul style="list-style-type: none"> ▪ Use of enterprise monitoring and alerting appliance (EMA) ▪ Use of proven toolsets ▪ Maintain optimal configuration ▪ Ongoing performance tuning ▪ Out-of-hours and on-site support included ▪ Use of proven best practices ▪ Proactive problem Management
